Is there some action to be taken? A: It is always acceptable to propose a trivial edit if you can improve the post. This is true of all posts, not just those related to Stack Overflow. There's a community wiki answer describing the appropriate use of editing. As a few examples, one of the last posts edited was an old question on a race condition, where the problem had been found and an answer offered. This was an answer that actually wasn't a very good answer; it was merely a pointer to a related, but slightly more specific question. It didn't really deserve to have its answer deleted. Another was a one-line clarification made to a question of potentially high quality. In short, you should be doing the right thing. Often, just editing with "Improve something" is what's needed. If there are

Two words first: It can make it easier to figure out what we have by its list of available modules. For example, many times we might want to know whether a document class exists or a particular data type or function. Additionally, using this lookup capability I can get acquainted much more easily with the nomenclature, which I really prefer because I would like to see what we can do before I select one method or another. Here is a list of some of the stuff we have in the More Matlab Modules section: Image Processing and Computer Vision
